METHODS AND PROCEDURES OF AGRO BASED INDUSTRY OF THARPARKAR AND BARRAGE AREA OF SINDH

Gobind M. Herani
Khadam Ali Shah Bukhari Institute of Technology

Abstract

This study is about research methodology and procedures adopted for the primary data of agro-based industry of Tharparkar and barrage area of Sindh, and seventh chapter of the thesis of Ph.D submitted in 2002. In this study detail of the consolidated data about the sample characteristics of this random sample survey are being given, collected through questionnaire, by poll questions about agro-based industry, and are analyzed by tabulation and charts. This data is primarily and is first ever study of Tharparkar on the subject. In giving the random sample characteristics, every attempt was made to give almost necessary information about the village farmers of the defined area out of which sampling was done. It is concluded from the study that in Thar livestock is sustainable source of income at first level and rangeland is at second level and crops are at third level. In barrage area crops are sustainable source of income at first level livestock is at second level and rangeland is at third level this study will help to policy makers for further planning.

Keywords: Methods and Procedures; Agro-Based Industry; Livestock; Rangeland Plantation; Tharparkar; Sample; Survey

JEL Classification: B41;C81;C83;D13;D18;D24;D31;P17;P47;P;QQ51;Q56

CHAPTER-VII

METHODS AND PROCEDURES

I. Research Methodology

Data was collected to achieve the result for the purpose, scope and hypothesis of this study. For the collection of data, there are two types of references and source, primary and secondary.

A. Primary source

The methods for conducting inquiries, in order to collect primary data of agro-based industry, can be of three types:

- i). Case Study Method,
- ii). Statistical Method and
- iii). Sample Survey Method.

This study is based upon the random samples survey method and collected data is tabulated in tables and analyzed for the defined purpose covering the period 1988-2000 and it is described as below:

The Sample

The primary data, for Tharparkar, was compiled through questionnaires filled in by 1771 families from 30 villages of Thar District, which consists of 2350 villages (1) with the population of 9,14,291 and covered area 19,638 Sq. KM. (2)

The whole Thar is sandy with dunes, therefore, traveling for the purpose of collecting data, of any sort, is really very difficult. While selecting the villages for survey, the villages of typical nature were marked in order to get complete information about the whole District.

At the same time, the primary data, for barrage area of Sindh was compiled through questionnaires filled in by 1985 families from 30 villages of this area of Sindh Province. It is Province of Pakistan, with the population of about 15.3 million in rural area and 14.6 million in urban area. (3)

The whole barrage area of Sindh is mostly flat, therefore, traveling for the purpose of collecting data, of any sort, is much better than Thar. While selecting the villages for survey, the villages of typical nature were marked in order to get complete information about the whole barrage area of Sindh.

In this connection it is worth mentioning here that in order to collect the data on the prescribed questionnaire, it was compelling need to stay in each village for many days. In order to get the questionnaire, meetings with the persons in a chosen village was a difficult task. Therefore, cooperation of reputed personalities of the area was sought. The job was also difficult in the sense that the villagers hesitate to cooperate with strangers. (4)

The purpose of personally collecting and getting the questionnaire filled in required explanation. The questionnaire was in English; therefore, farmers were called in-groups. The contents of the questionnaire were translated for them in Sindhi and Thari languages and their questions were answered. Thus it was possible to collect the questionnaire then and there. (5)

Since the basic idea for selecting the topics of this study was based on random sampling in which every person was included as a sample. In this way the opinion of labors of defined area could be determined as an alternate to an already completed count of population. (6)

A Comparative Study of Agro-based Industry of Tharparkar with Canal Barrage Area Sindh (1988-2000), Suggested Techniques Leading to an Industrial Economy, PhD Theses, Department of Economics, University of Sindh, Jamshoro, April, 2002, Chapter-7. By: Gobind M. Herani

B. Secondary Source

The Secondary data was collected through different sources such as: Libraries, Newspapers, Magazines, Thesis, Census Reports, Addresses delivered by Govt. officials, Press Releases, SAZDA, Thar Seminar, literature of TRDP, Thardeep, Baanh-beli and PVDP working in Tharparkar. It was also collected by: websites of Government of Sindh and Thar, Grameen Bank of Bangladesh, Rural development studies, data collected by NGOs and Studies of foreign origin such as: similar studies of Denmark, Somalia Indian Gujarat and Indian Thar of Rajasthan.

Non-availability of data, on the one hand, and the accuracy of available data, on the other hand, was the major problem in the collection of secondary/published data, on agro-based industries. The example of such a data under this head was:

- i). Improvement of live stock,
- ii). Selection of fodder,
- ii). New sources for fodder purpose,
- iv). Search for markets,
- v). Knowledge of middle-men,
- vi). Local catalyst bodies and their work,
- vi). Number of villagers engaged in farming and other jobs
- vii). Total animal population at present.

II. Background Characteristics

The consolidated data about the sample characteristic of this random sample survey study are being given as under. In giving the random sample characteristics, every attempt was made to give almost necessary information about the village farmers of the defined area out of which sampling was done.

The method of measuring attitudes are quite different from survey research method to understand public opinion. (7) In sharp distinction to the open end questions, adapted the poll questionnaire, which is mainly used in collecting the information of this type, where a single question with fixed response were provided to the respondents. (8)

Through the questionnaire the attitudes and background characteristics of village farmers could also be ascertained and suggestions prepared to solve the existing problems.

The main headings of the Poll-questions in the questionnaire, with fixed responses were as under:

- i). View on the present state of agro-based industry
- ii). The types of existing agro-based industries
- iii). Live stock
- iv). Dairy products
- v). Crops/Agriculture
- vi). Non-crop/Rangeland
- vii). Ownership of land and agriculture
- viii). Choice of work
- ix). Remittance economy
- xii). Debt status
- xiii). Poultry farming
- iv). Fish farming
- xv). Mills

III. The Questionnaire:(For Tharparkar and Barrage Areas of Sindh)

Poll Questions:

Views on Present State of Agrobased Industry

1. Regarding dependency by employment.

You are in favour of which of the following?

Specific Questions.

A. Do you depend upon agro-based industry, which employs the majority of villagers and it is labour oriented?

B. Do you meet your needs without agro-based industry, by other employment, which are more labour oriented?

TABLE-7.1 REGARDING DEPENDANCY BY EMPLOYMENT.

Answer in favor of	THAR		BARRAGE SINDH	
	Responded	%	Responded	%
A	1435	81	1310	66
B	0336	19	0675	34

Chart- 7.1

Analysis for Tharparkar

This table indicates the dependency of employment, 81 % of the total families depend upon agro based industry that employs majority of villagers and is labour oriented and 19 % families say that they depend upon other labour oriented work not concerned to agro-based industry.

Analysis for Barrage Area Sindh

This table indicates the dependency of employment, 66 % of the total families depend upon agro based industry that employs majority of villagers and is labour oriented, and 34 % families say that they depend upon other labour oriented work not concerned to agro-based industry.

2. Regarding attitude of labour towards agro-based industry

You are in favour of which of the following two opinions

Specific Questions

A.To run agro based industry is easy for the labour

B. To do other work which is at this time available over there and is easy and profitable.

TABLE-7.2 REGARDING ATTITUDE OF LABOUR TOWARDS AGRO-BASED INDUSTRY

Answer in favour of	THAR		BARRAGE SINDH

6. Regarding buffalos.

You are in favour of which of the following?

Specific Questions

- Buffalos are better for milk for the use at home and meet its own expenditure by its production.
- They are expensive because of fodder and water drinking which is not available easily.
- They are useful only for rich people but not for poor because of their high cost and high fodder expenses
- They are useful but there is no market of milk.
- It is difficult for poor to have them for the purpose of income generation, because of high cost and their inability.
- Buffalos are income generating in all conditions in every respect.

This table is about mills. It shows that 86 % families say that, if crops are affected then mills get affected 17 % families say that mills are always running even in drought too. 97 % families say that mills fully depend upon crops. 100 % families say that mills are seasonal and do not employ for whole year. 3 % families say that they work in mills.

IV. Conclusion

From the detailed study of this chapter it is concluded that open poll questions have been asked from the farmers of Tharparkar and barrage areas of Sindh about agro based industry. In this background characteristic and opinions are taken through questions. This data is primarily and is first ever study of Tharparkar on the subject.

From the questions as about Tharparkar it is concluded that 95 percent families have strong attachment with crops agriculture and livestock rising. They waste their time in expectation for rainfall, which is never confirmed. They do not search alternate source of income generation. Majority of Tharies is poor and 80 percent are in debt. For the income generation for each and every one first is goats and second is sheep. Goat can survive in drought too. Mostly people like the income generating at their own villages. If 20-50 goats are reared then one family can meet, their needs properly even in drought. All types of livestock except buffaloes can be the source of income if fodder is made available by any meant. If poor would be given better races of livestock on loans and refundable in installment basis then up to coming four years they can be independent and self sustained. But these loans should follow the policy as Thardeep is doing.

For the barrage area all crops, livestock, dairy farming, fishing and milling all are well balanced as compared to Tharparkar.
