## Author Note

Yang I. Pachankis, Orcid: [0000-0002-5252-8670](https://orcid.org/0000-0002-5252-8670)

The author receives royalties from Eliva Press from the book *The Lenses of Quantum Physics on Earth to the Cosmos: From the Humanities to the Apocalyptic Inevitability*.

The author is victimized by human trafficking for homosexual marriage. The author has been ordained by the Universal Life Church with customary international law for marriage, and has applied for naturalization overseas with the US government.

Correspondence concerning this article should be addressed to Yang I. Pachankis. E-mail: [yang.pachankis@gmail.com](mailto:yang.pachankis@gmail.com)

# Jeopardies in Human Security and Politicization of COVID-19

## Abstract

**Background:** The systematic review is conducted during the COVID-19 lockdown measures of PRC with a history & continuation of nuclear proliferation, current electronic warfare, metallic pollution from military heavy industry, and actinic radiation pollutants from chip production. Apart from the biomedical harm sources, the purposes behind the source productions such as chips have been the sources of psychological tortures in neuro-cognitive warfare. The systemic review adopted a human security paradigm during the Nov. 24, 2022 public responses to the fire in Xinjiang in preventing the online responses from being subsumed by such operations with cognitive-affective psychology in a low-resource context.

**Methodology:** The systematic review adopted meta-analysis on bias-to-error factors contributed by the environmental determinators in the phenomenologies of PRC's public health policies contrary to the declared results. Due to the simultaneity of psychological practice in preventing torture and biomedical ethics, a meta-ethic analytic review is conducted and dissected the power politicization of COVID-19 to the measurements ought to be carried out currently. A representative case is included with informed consent of the patient, which also gives an overview of tortures happened to the governmental officials and bureaucracies.

**Results:** PRC must cease and desist the human trafficking methods in quarantine measurements, which also contribute to the psychological and actual tortures. With current clinical preparedness, Omicron variant has given an opportunity for herd immunity against SARS-CoV-2. The environmental factors in PRC substantially undermine the referential values of biomedical data in international settings, and if applicable, biomedical products export in the global supply chain. Genetic technologies based on applied research in telomerase must have thorough assessments in their impacts on telomeres consumption. Renormalization from and further research into nuclear proliferation and environmental determinants is the only way to improve public health.

**Keywords:** Omicron, herd immunity, medical ethics, meta-ethics, proliferation, regional public health, human rights, right to health

## BACKGROUND

The World Health Organization (WHO) categorized five determinants of health, i.e. social, economic, and physical environment in exterior factors and individual characteristics & behaviors in internal factors [1]. In minimizing the irreversible long-term impacts to the exterior factors in the commons for the protection of people's right to health and freedom from disease, [2] defined the negative duty for the duty-bearers as "not to deprive the right-holder of access" to such intrinsic rights, and the transgression to such rights started with trespassing the negative duty by the supposedly duty-bearers. Militarism regimes' breaches to their negative duties in public health often accompany with a false positive claim of duty fulfillment, replacing the rights in question into a different concept for political negotiation, resulting with further suffrage for the right-holders and more severe transgressions thereto in

an “all-encompassing way” by resource calculations to the trespassers’ ends. The severity of the environmental determinators’ derogation [3] can be seen in the propulsion footage of Shenzhou-15 launch seen in **figure 1** [4], where the rocket protective paint material reacted in mini-fission with actinic radiation pollutants due to high momentum proton [5], contrasted with propulsion-enacted pollutant fusion with unutilized energy source, and the energy source’s inevitable pollution discharge.

The outbreak of SARS-CoV-2 [6] started in the timing of Sino-America Trade War *status quo* in the supposedly transitional economy in PRC after a dictatorial downshift with constitutional change, whereby the territorial monopoly grips tried to suppress the initial information and obstructed the prime response time [7], for an oligarchic equilibrium distributed by currency controls in the global economy before the effects spread worldwide [8]. The dictatorial groups’ politicization of COVID-19 upon the military-affiliated bottom-up responses [7] strategized in pushing for expanding its individually targetable mass surveillance system used in Xi Jinping’s *coup d’état* [9], and the public health administration entities in PRC does not have access to integrated hospital database [10]. A frontline medicare’s account of experience has been deleted by the PRC cyber operations after its initial appearance on “Headlines Today”, whereby they were asked to trace the population contact histories through the police surveillance systems in the stead of methods comfortable to medical ethics.

Obstructed by the complexities of power dynamics and interests, a mixed methodology between psychological health sampling from the mass neuro-cognitive warfare [11] and biochemical security identification in human security has been adopted, inspired by the Cognitive-Affective-Behavioral model in low-resource context without behavioral intervention in respect of the patients’ autonomy [12,13]. A representative case from psychotherapy is presented on the psychological torture from a massacre and is demonstrative of the mass psychological behaviors. The patient despondently preserved the information on the Nov. 24<sup>th</sup> Fire in Xinjiang under the traumatic responses from the details in 2009 [14]. The systematic review dissects public health from politicization agendas with the scientific basis of public health, whereby cases of legal concerns appeared that secret personnels were dressed in medicare uniforms or undercover in residential management committees [15] and confined state authorities, such as a former Highest Court official who advocated for judicial independence and is working on ensuring human rights being respected in the

**Figure 1** Organized screenshot from the Shenzhou-15 propulsion footage. [4]

politicized “pandemic responses” with mass phenomena of torture on the civil society and minors.

Considering the sources of mass atrocity *post hoc* to proliferation and contamination of outer space thermonuclear environment [16], meta-ethical principles in international laws have been adopted. Experimental trials for cosmological environmental determinator research have been preregistered for remedies for the future generation’s anticipations [17]. Preliminarily, the systematic review answers the following questions: 1) how the historic proliferation and actinic radiation from chip production [18] can affect the statistical validities of the quarantine measures; 2) why the current quarantine is unscientific for medical research in statistical validities for disease prevention; 3) why runs on medical resources happen in mainland China without contribution by Omicron and other variants [19]; 4) why the current PRC governmental statistics on SARS-CoV-2 are exacerbated; 5) why removing quarantine mandates is integral to the alleviation from fundamental human rights transgressions in mainland China.

## METHODOLOGY

### Red Scare in Xinjiang

With knowledge on the patient’s prior trainings in physical acting with “liberating nature” training, text-based social theater cue was applied for hypnotic emotional swap from attachment on video footage to rational expressions. The cognitive-affective approach is dependent on my previous positive collaboration experiences in professional settings with the patient for about three months in a film crew, and the functional memories of working experience in reporting was adapted to the specific settings in reality analysis of the patient’s rationality, after the patient responded to my request on sending me the footage saved from WeChat sources before the deletion by PRC authorities. The cognitive-affective therapy was intuitively implemented from the patient’s expression of hopelessness on one specific sarcasm on fundamental human rights made publicly by a Foreign Ministry Spokesperson [14]. The source event contributing to the patient’s behaviors and rumination is reorganized as follows.

In 2009 there was a mass massacre in Xinjiang, and the United Nations Peacekeeping Force nearly entered that region. In order to prevent information on the true situations coming out from the region, the Chinese government cut off internet access from that region for half a year. The PRC central government ordered troops to Xinjiang for brutal massacre on protestors of the ethnic minorities, for an operation of “caught on camera so that oppression can be justified”. The killing lasted for one hour until the police arrived, and the gunned police were ordered not to intervene. Many police had psychological breakdowns afterwards from witnessing the scenes and being forbidden to act according to human conscience, and the police were heavily trained to “obey the Communist Party of China (CPC) for the absolute righteousness of the latter”. The patient knew the truth but due to the extreme pressures of truth-burying operations and mass media false narratives, living in a media environment of lies with the truths bearing in mind caused the patient’s feeling of brokenness and self-doubt. Even for the local Xinjiang officials after the massacre, they became fear of governing in the nominally self-governing region. As long as no similar incidents are about to recur, the local officials tend to comply with the CPC central government for the Red Scare effect.

In my psychotherapeutic treatment, I noticed the patient’s behavioral tendencies of discreetness with information, and I gave an affirming cue that “the contexts are the same”. The patient expressed the triggering mechanism on the sense of horrors with the Chinese Foreign Ministry Spokesperson Hua’s account after the incident that “if the Americans go to see the Uighur people in Xinjiang, they would be envious of their happiness”, and this triggered a near mental and emotion breakdown of the patient. The patient followed my direction of emotional outlet of anger from the psychoanalytic model [20], and the patient’s expressed on the particular incident similar to the operational modes of the 1989 Tiananmen Square massacre. I affirmed the patient’s sense of realities by similar events, including Mao Zedong’s massacres where a whole village were killed including infants. I encouraged the patient’s rational analysis on the events and not to be intruded by authoritarian narratives of police or military, whereby especially for military personnels in PRC, their lives are hedged against the lives of the people they are ordered to kill. I gave a halt to the distinction between what is human nature and what is not. The patient affirmed my psychoanalysis and expressed that their local officials have been under tortured pressure testing with fear, and I requested the patient to remember the truths instead of otherwise. I encouraged the patient

recovering the senses of distinguishing the truths from falsehood, and offered some of my insights from my other research activities. For knowing my limitations and the limitations of remote healing, I eased out from the therapeutic section when the patient acknowledged the senses of reality to mentally block the false narratives from intrusion.

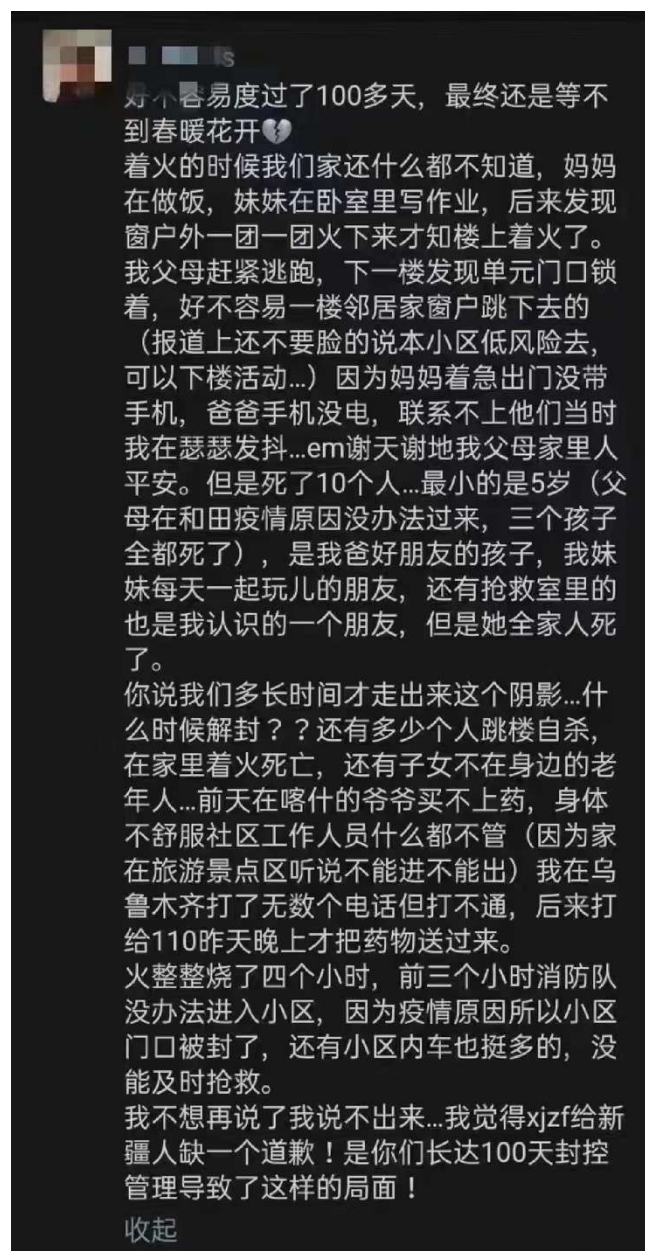

The patient's reactive behaviors to the saving of information may have been influenced by prior working experiences, where the patient assisted my editing works of saving and sorting through footages, and comparing the footages' information contents from the director's intentions and the actual scenes the director designed and carried out in action. The specific media psychology technique has also been my own method of psychological health maintenance under the common circumstantial sociopolitical environment [21], where the military and police personnels have more demanding needs for the humanities to be acknowledged instead of the designed isolation and thought control [11]. In my causal social interactions in these circumstances, I often reacted with principles according to the Geneva Conventions and Universal Declarations of Human Rights with them, so that their human dignities can be aligned with their senses of professional identity.

### November 24, 2022 Fire in Xinjiang

The triggering event is not a single case phenomenon in the mandated quarantines. Similar events include a 3-year old child's life spent in quarantine and lost by CO intoxication where the residential areas' strict obstruction on the parents' leaving the area even with the other residents' pleas, 15 to 18-year olds being camped in -10 °C being denied with heated blanket with one being raped, recent vaccine mandates forced on the elderly, and many more with forced enters and physical violence. Among the 10 deaths in the fire in Xinjiang, three children were locked at home without parents with the youngest at 5, and another whole family demised in the fire. **Figure 2** shows the deidentified witness's WeChat friend zone on the details of their lives before and upon the incident.

The direct cause of deaths in the fire was the consistent quarantine measurements of illegally restricting the residents' civil freedoms and, for many other cases, locking the residents in their homes from the outside. For the specific case, the entrances to the residential areas have all been blocked by metal barriers, including the building entrances. The fire extinguishing automobile was not able to get near enough to the fire sources from the ground pumps while efforts of breaking the barriers were under way. The fire lasted four hours and for the first three hours the firefighters were not even able to get inside of the residential area.

The detestations erupted with the government's media operations. Before the fire, Canadian Chinese pop singer Kris Wu was

**Figure 2** The victim / witness' accusations.

imprisoned by the Chinese authorities for sexual misconduct allegations, where within a half-hour time frame, all major state-controlled media pushed the same news on the imprisonment sentence with large amounts of financial deprivation. Later in the fire with online exchanges of information, mass deletion

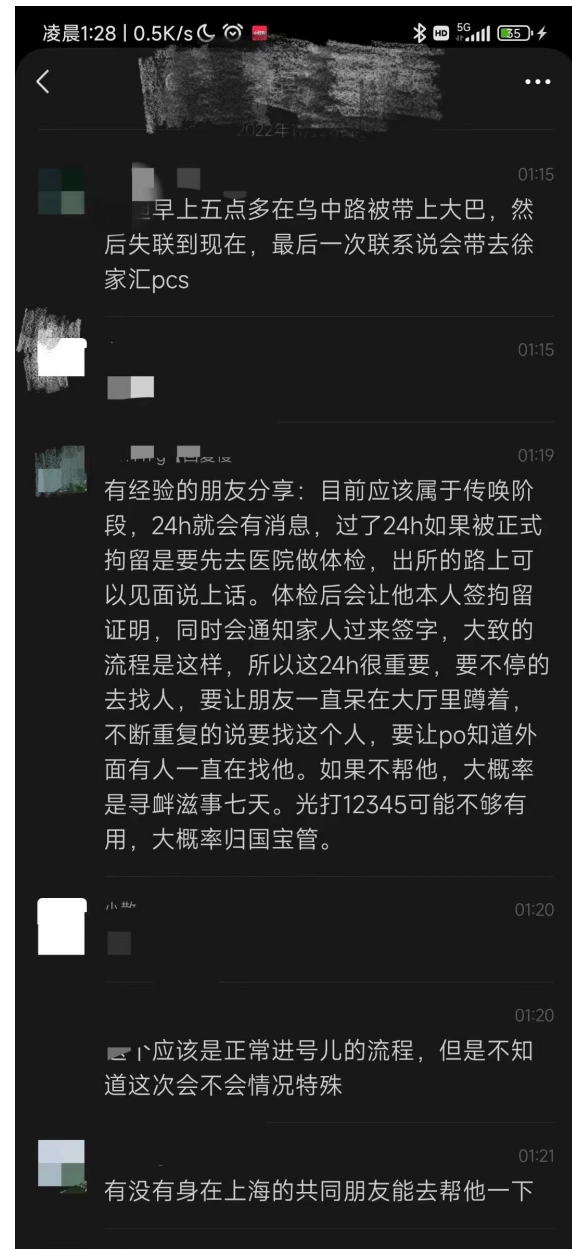

**Figure 3** The reversed narratives by PRC Foreign Ministry Spokesperson on population opinions and wills in governmental satisfaction outlet by Xinhua News.

was accompanied with governmental voices accusing the victims that “the doors were open and they did not know to go out” and “the photos of buildings being locked were photoshopped maliciously”. This further enraged the people and three lines of events started: 1) local residents went to the streets for protest, and in one footage gunshots were heard, 2) subsequent parades started in mourn of the deaths where suppressions further enraged and encouraged other peaceful assemblies, and 3) people online started to share evidences kept on the brutal and violent conducts in the quarantine measurements.

In the conducts in Beijing Changping, a CPC member with the community management personnels exchanged notes on how to deal with people who are unwilling to be quarantined: 1) give them false accusations and intimidate them with whatever statutory laws that can be applied; 2) attack and / or utilize their psychological weak spots, such as children for parents and family members; 3) illegal imprisonment by force, and etc. From the video, people found previous authoritative news sources’ report on the person, who swore as a CPC member “being inspired to serve the people good with confidence and ambitions”. During the online activities, the authoritative government media Xinhua News pushed for one passive aggressive message of Xi Jinping condoling the earthquake in Solomon Islands, further making the top-down context a power show, seen in **figure 3**. In the video “4b1eef45883fc7da65c53a0709efc2.MP4” of the press release of Information Office of Beijing Municipality, the officials reported to empty seats counting for informed consent on their quarantine works on the next day. The politicization of quarantine measurements for implementing individually targetable mass surveillance system with health codes were also expressed by the people online [22,14].

The mass psychological process in the information exchanges resembles to finding external validations for their inherent senses of realities and perceptions, contributed by the state-and-party-sponsored media operations of censorship and false narratives, including intimidations from the mass atrocities. With Iran’s protests in the World Cup, specific violent police murder case of which has not been unfamiliar to the Chinese public, the authorities ordered the media professionals not giving closeup shots in live broadcasting in the following events. The information on the media operations acknowledged the people’s own perceptions instead of media designs, including analogies on the framed murders of the Falungong members on the Tiananmen Square. This has made the digital social media an academic exchange platform, including some posts on specific Nucleic Acid PCR Test companies’ registration activities, where forced quarantine shortly follows the companies’ registration places and the companies were attributed to the same person with nested interests. These contradict with anticorruption campaigns of Xi Jinping’s. In the subjective notes on the continued cyber monitoring on me [14], further cases started to reveal the topological operations of the WeChat platform in power-spatial operations, where a person’s

**Figure 4** Peer group communicating support methods in preventing tortures and abuses after being kidnapped to the police station.

friend zone posts from Hong Kong were separated from being seen by some people but not others without the person's knowledge [7,22]. Protests continued the days followed, including students around the country. Passive-aggressive threats to the students of Tsinghua University also appeared on Netease News in sending the students back to their hometown [23], along with Xi Jinping's "welcoming, seriously studying and absorbing the good-intentioned criticisms online" [24]. The distortion of public moral compass through a combination of power actions and reverted media messages has been key to Xi Jinping's *coup d'état* in the previous anti-corruption rhetorics and setting-ups of new institutions for his power base [9,7,16]. A former military personnel expressed to me that for the students whose academic careers have been impacted by the protests, they can apply for asylum later when returned to safety. Absurd behaviors by the government were also noticed by the people online that in Shanghai on a road named after Wulumuqi where the fire took place and road of which people in Shanghai mourned over the loss of lives in the fire, the road's sign was ordered to be removed and carried out like corpses by the workers. The behavior in another sense also eased some of the mass psychological traumas in getting out to the streets from the histories that every violent suppression followed by the last night's fire fighter departments' washing the blood away from the roads and pretend nothing had happened in the next day. On November 28, 2022, an undergraduate classmate's friend is reported to be kidnapped to the police station seen in **figure 4**, a musician who placed the first flower there, whose action influenced other people doing so in respect of lives lost, and the police locked the flower scenes down before the musician was taken into custody. Psychotherapeutic healing in moral psychology often happens in music, and enforced music in the People's Liberation Army linking the militaries' moral senses to dictators has been a routine practice.

### Questions of Science in the Quarantine Measurements

With the prerequisite of proliferation issues in regions such as Beijing and Chongqing in mainland China [3], not only DNA damages can directly result from them, further associated erosions to the evidence-based determinants of health can collapse the institutional determinants of health, including characteristics and behavioral changes resulted from mental & psychological health transgressions [1]. The WHO discretely recommended "enhancing surveillance and sequencing of cases" [25], emphasizing on the epidemiological case sequencing and not the surveillance infringing the fundamental human rights of the people, and the recommendations for the people are social distancing. With the frontline voices on the ethically unacceptable experience using state-sponsored mass surveillance system for stalking behaviors on the civilians with Nucleic Acid PCR Tests, public health administration in mainland China was put into question [10]. With statistical evidence, Dr. Ning from Harvard University compared the in-hospital death rate in mainland China to the population death rate, and the in-hospital SARS-CoV-2 death rate is 6% lower in probabilities from the increasing total death rate in mainland China from 2016 to 2020 [19]. Ning inferred from experience that 1) "Omicron does not increase death rate", corroborating with [26] that "there is a reduced risk of hospitalization for Omicron compared to the Delta variant"; 2) "in-hospital conditions are good for COVID-19 infected patients"; 3) "there are statistical errors in CDC's infected and death population"; 4) "unstable statistics". [19] noted that "the rate of death for people infected by COVID-19 is lower than non-COVID-19 infections", and hospital resource runs are caused by concentration of infectious department in-hospitalization due to the quarantine measurements. In other words, eugenics policies are present in the quarantine measurements.

From the perspective of good-intentioned criticism, deuterium catalysis in water oxidization disrupts with pH values in unsalted water resources [27] and pose RNA mutation risks in urban and agricultural water supplies. For the liquid's relative heavier mass than water, its penetration to ground water contamination through soils & rocks not only affect the precipitation cycles of water atmosphericization, but also contaminates the natural food and water resources with their sustainable potentials locally and regionally. With direct threat to public health, water contamination's direct impacts on the first sector of economy further derogate access to healthcare in the third sector by affordability. Albeit professional ethics in the medical sciences prevent total dysfunction for case-by-case necessities, growing demands in pharmaceutical solutions deteriorate the third sector's capacities in disease preventions, derogating the frontline professionals' capacities in fundamental research and their positive professional ethics. Such

bureaucratic obstructions were prominently revealed by the Chinese police's admonition on the whistleblower's dissimulation of public health information and decisions in obstructing the WHO in issuing global public health emergency [7]. The water oxidization from deuterium catalysis impacts on the production phase in pH values of the Nucleic Acid PCR Tests with the other bias factor from the residents' drinking water supplies' impact in the circulatory systems with the Cycle Threshold [28].

From the other perspective, quarantine decision-making has been based on the realtime signal surveillance data from the telecommunication individually targetable mass surveillance system [7] and the realtime movements of population labelled by the "health codes" and calculated probabilities in social contact distances and histories. This is corroborated with a truck driver's experience of being stopped on the highway by passing through a signal area with red codes and starved for two days before being helped by a pal nearby acquainted online. The essence of the conducts constitute human trafficking on a population scale, explaining the state-sponsored chip productions for smartphones [18] with mandated association of telephone numbers with resident cards [29], and the "precision testing sites" by company registration. This specific "policy" has also been contributing to the public fears on the media operations of the regime both for privacy intrusion and retribution behaviors from the regime government, including forced quarantine on people with COVID-19 negative results following the parades. This evidences that the subjective intentions of quarantine in mainland China have not been out of public health necessities, but the subjective behaviors of the decision-making groups. From the real medical professionals' preparedness in treating SARS-CoV-2 and the mild symptoms of the Omicron variant with the same infection capacities, it is plausible to infer that Omicron is an opportunity for herd immunity policies in the disease-specific situations [23]. Further capacities of the public health system need to be put in predictive research in environmental determinators of RNA mutation risks in proliferated regions.

### **Issues of Genetic Sequencing Biases**

Without specification on the biochemical processes of fusible consumption in duplication cycles over one's lifetime, [30] explored the sister-half DNA's chromosome 9 with X-ray induced rearrangement in meiotic anaphase in telophase nucleus finite multiplication in breakage-fusion-bridge-breakage mechanism in the female and with endosperm, whereby healing processes are most prominent in embryos and with plant tissues in the nuclear cycles. Telomeres' shortening over one's lifespan has been associated with oxidative stress and carcinogenesis, and telomerase enzyme serves for telomeres maintenance in young cells and biochemical engineering targeting for cancer therapy designing [31]. Albeit researches in bypassing the end-replication problem started in the 1970s, telomere capping in telomere fusions' protective functions during mitosis is still the experimentally established paradigm in discrete clinical theorization, whereby loss of subtelomeric DNA methylation during telomere position effect in repressive histone modifications and heterochromatin protein 1 binding may result in telomere length increase with more detailed pathway studies in progress [32]. Based on quantitative biochemical proliferation [33], qualitative therapeutic targeting in regenerative medicine and cancer treatment from human reverse transcriptase telomerase (hTERT) has been explored [34].

[35] specified the loop-mediated isothermal amplification method, coupled with reverse transcription (RT-LAMP), in genetic engineering with samples from medical surveys, along with other unconventional methods. Strand displacement used in the detection methods are genetic-specific with respective targeting mechanisms in individual cases. Bias factors for amplified products exist in "accumulation of DNA changes, pH levels, or by changes in turbidity as magnesium pyrophosphate level increases" and "Calcein fluorescent dye or fluorescent intercalating dye" [35]. Due to proliferation in mainland China, including electronic warfare's impact on individual biochemical processes with statistical differences [3], only Calcein fluorescent dye or fluorescent intercalating dye have less bias factors to Nucleic Acid PCR Tests. Furthermore, due to the genome methods involved, the values of the Nucleic Acid PCR Tests' original data lie more with the evidence for proliferation harms distributed across population than the positive or negative results on SARS-CoV-2 antibody and / or antigen, and these original data have strict access authoritarian administrations [10]. If using the genome sequencing method [35] in the population statistically exposed to proliferation and other pollutants, and if vaccine production and standardization on the targeting designs used the metagenomic and / or pathogen RNA/DNA specific binding approaches, the bias factors further increase by strand displacement involved with relation to the recombinase

polymerase amplification process, not accounting for the liquid sources used in the culture dishes in the laboratories. Therefore, the environmental factors have far surpassed the genetic sequencing priorities in mainland China. Such imminent necessities also contribute to other genetic-level production designs on biomedical productions originated therein. If export exists, including statistical reports in genetic sequencing references, further biomedical disasters can happen with vaccine mandates [8].

### **Qualitative Error Factors in Outpatient Spatial Trafficking**

It can be seen above-analyzed, that the human trafficking underlying the “health code” of PRC is not from the statistical vantage point from hospital inpatient. The term outpatient in the spatial trafficking analysis is also used in a loose sense, indicating to the forced quarantines and hospitalization. Without the inpatient vantage point data, epidemiological research on the epidemic distribution cannot be truly carried out and effectively feedback to the hospital managements in resource optimization according to circumstances. For the airborne RNAs, pollutions in the air further serves as culture dishes for carrying epidemic sources, and the factors of electronic warfare further increases the flux densities for the spread of live viruses. With proliferation and effects from deuterium catalysis, sedimentation of epidemic sources further increase their water borne capacities. This corroborates with [6] that “high transmissibility of the virus (occurs) during mild disease or the asymptomatic period”. Further researches on the RNAs’ miniature biochemical activities are needed, or a through environmental report for determining what sorts of RNAs thrive with the environmental determinators. Collective spatial trafficking only traces the social contacts of the population, but not the detailed epidemiological traces. Therefore, the utmost referential method’s economic wastes further impact the real economy from social and economic mobility issues. Moreover, collective PCR tests increase the probabilities in airborne contagious activities and residential lockdowns do not take waterborne capacities into consideration, especially sewage pipelines.

In areas where proliferation and electronic warfares are not the issues, spatial models of climate change and even cosmic changes may be beneficial for long-term environmental anticipations [36], such as a preliminary proton decay theoretical hypothesis [17]. Changes in environmental plasmas can directly exert statistical DNA damage to the individuals, and RNA [in]activities in the environmental determinators. A cosmological projection is that the accumulative effects for environmental factors can further increase the statistical weighs in probabilities for DNA damages in humans and mutations in human biochemistry and molecular pathological epidemiology. Any methods of such modeling do not require human trafficking. For the complexities of environmental determinators in local and regional settings, spatial statistics can never replace the localities of clinical trials, not accounting for the individual histories in environmental exposures and physiological developments. This means that in the vaccine research and production chains in the supply side, environmental factors must be accounted for with the globalized production and finance systems. From the functional analysis, the current “outpatient” spatial trafficking is evidenced to be non-medical purposed, and the purpose analysis follows a psychopathological trail. Note exchanges with a professional lawyer took place on WeChat friend zone, on “who do not want to be infected the most by the SARS-CoV-2 with the power to exclude all other threats?”. It is by such wants the gross human rights transgressions have taken place in PRC by the disguise of COVID-19 responses. Such ordered actions have also been the contributing factor to the current mass psychological behaviors in the PRC regions, including bounties for bringing people in in the quarantines.

### **RESULTS**

Nonproliferation is the ethical mandate in the negative duty for the duty-bearers in not transgressing the people’s right to health, while arms control prevents further deteriorations in human rights transgressions, and decreases the major sources’ impact on climate change. In order to exercise positive duties on the right to health, disarmament will still be a necessity for the maintenance costs in public health with nuclear and chemical weaponry, especially considering the RNA mutation capacities. Besides impacts to public health and human rights, electronic warfare catalyzes climate change by mass release of electrolytes to military and industrial airborne pollution. Pollutants travel with alkaline in proliferated areas, furthering airborne disease dispersion capacities along with particulate matters, yet economic

compartmentalization and political judicialization restrict people's freedom and ability to move [37]. With the power greed behind the contract breaking of necessary negative duty, the bottom-lines ought not to be trespassed further.

*Post facto* to emergent vaccine requisitioning, the genetic sequencing and DNA loads in vaccination and genetic engineering need to be further studied before human trials, both on generalizable and non-generalizable accounts of researches, with the latter more focused on regionally specific settings. Cautions must be exercised with the hTERT and RT-LAMP methods in biochemical and biomedical engineering for the concerns in developmental effects in genetic engineering and treatments. The public awakening on the COVID-19 pandemic politicization is a positive mass psychological recovery, even though Red Scare still exists and persists in the Chinese society striving to counteract political stigmas. Elements of crime against humanity exist in the politicization of COVID-19, and the negative effects have proliferated to the global realm. The latter is contributed by the power assertions in the United Nations system from an absolute power's psychological processes in ordering actions and making decisions.

Removing quarantine mandates is preliminary to comply to the Declaration of Tokyo, and cautions need to be exercised in proliferated regions for RNA mutation rates and variants, which may surpass the herd immunity processes offered by the Omicron variant. Humanitarian actions are required for aforementioned regions such as in some villages in Beijing, according to a source who prefer our conversation to be kept confidential and only to my knowledge. The PRC governmental statistics of SARS-CoV-2 are human trafficking statistics and not outpatient statistics. The "realtime" statistics exacerbate the COVID-19 pandemic situations, and have no pragmatic values to epidemiological research nor guidance for in-hospital rates. In-patient backtracking from such systems is not statistically valid for international nor global epidemiological communications. Such exacerbations again, after the initial concealment and suppression on truth revelation [7], have disrupted the global pandemic corporations and harmed the global community's right to health with decision mechanism.

Runs on medical resources in mainland China have been contributed by the derogating environmental factors mostly contributed to autocracy-purposed productions. The accidents from the quarantine measurements and suppressions may have further contribution to the death rates to the PRC population, and the collective hospitalization arrangements contribute to the runs on medical resources. Public mental and psychological health will have more weighs in recovery from the pandemic in PRC than the biosecurity concerns due to torture. In the unscientific COVID-19 responses, illicit financial incentives are not excluded from the probabilities. The collapse on the institutional determinants of health started at the initial outbreak of COVID-19 regionally and globally by the politically postponed issuance on the global health emergency in the WHO, and the lasting impacts remain even today with the vaccines and quarantine measurements. Scientific methods in PRC regions need to put the environmental derogation factors at the front of the public health researches regardless of the SARS-CoV-2 existence. Such researches may correct the errors in: 1) pharmaceutical productions; 2) fundamental assumptions in public health research regionally; 3) accumulative effects on other virological infections; 4) nutritional and developmental factors in human physiology and biochemistry in public health; 5) recovery for the medicare professionals' ethical standards suppressed by the mass psychological impacts; and 6) predictabilities for future preparedness.

## **DATA AVAILABILITY STATEMENT**

The data from the public awakening and the tragic incidents deleted by the PRC authorities are publicly available on *Zenodo* with the DOI: [10.5281/zenodo.7368502](https://doi.org/10.5281/zenodo.7368502). Further details of evidence are available upon reasonable request.

Chongqing, 402762  
[yang.pachankis@gmail.com](mailto:yang.pachankis@gmail.com)

The works are conducted in a neuro-cognitive warfare background with mass atrocities and crimes against humanity with proliferation, electronic warfare, and etc. The medical administrative system of the country where the works have been conducted does not live up to the Declaration of Taipei, the Declaration of Geneva, and the environmental determinants not living up to the Declaration of Helsinki. The psychotherapeutic works live up to the Therapist's Oath and Declaration of Tokyo, and with informed consent of the patient(s), meta-ethical principles have been adopted to optimize the situational conducts in fulfilling and at least not derogating the above-mentioned declarations, including the Declaration of Hong Kong and Declaration of Venice, whereby the PRC State authorities have been pushing for vaccinating the elder people. As an extension to the Declaration of Tokyo and the Declaration of Hong Kong, the contamination of outer space thermonuclear environment has been reported in an open access journal accessible with the DOI: <https://doi.org/10.5281/zenodo.6618334>, apart from the reports on the crime against humanity to the International Criminal Court and International Court of Justice. Research for solutions has been preliminarily conceived and has applied for funding for experimental trials with the preregistration DOI: <https://doi.org/10.17605/OSF.IO/KP53U>.

November 30, 2022
